During the past 14 years, 25 States modified their laws to permit optometrists to use therapeutic drugs in the treatment and management of ocular diseases. This study's findings provide further evidence as to the cost and availability of routine eye care by the nation's eye care providers as the remaining States debate optometry's role in providing eye care.

INFORMATION FOR CONTRIBUTORS TO PUBLIC HEALTH REPORTS

Public Health Reports is the journal of the U.S. Public Health Service, published six times a year by the Department of Health and Human Services. Its readership includes the public health community at large, both in the United States and abroad, at the local, State, and national levels, in the public and private sectors.

The journal is interested in scientific papers concerned with the many facets of health care, disease prevention, health promotion, medical care, community medicine, and the delivery of health services, as well as technical reports documenting studies and research. Papers on new programs, new projects, and new ideas, even when they are experimental in nature, are welcomed. Letters to the editor commenting on specific articles published in the journal are encouraged.

Public Health Reports articles are abstracted in various journals, such as Abstracts for Social Workers, Current Literature in Family Planning, and so on. They are indexed in the annual Cumulated Index Medicus and monthly Index Medicus of the National Library of Medicine and the Cumulative Index to Nursing and Allied Health Literature. The full text of articles is available on the MEDIS data base; synopses are available on the GTE Telenet Medical Information Network.

All manuscripts are considered with the understanding that they have not been submitted for publication elsewhere. Almost all papers are reviewed

by technical experts in government and the private sector. Comments of the referees are made available to the authors.

Manuscripts are published in one of the three formats: as general articles that usually do not exceed 15-20 double-spaced typewritten pages, exclusive of charts and tables; as "Public Health Reports in Brief" that are less formal, of shorter length, and of slightly less significance; or as items that qualify as news, announcements, or abbreviated descriptions of programs or projects.

Papers, including the list of references, should be typewritten double spaced, with the title and authors' names and affiliations on a separate sheet. They should have no more than six authors. All charts and tables should be on separate sheets. If a paper is accepted for publication, we will request a 5.25- or 3.5-inch IBM PC-type diskette of the article stored in a word processor file, formatted in MS DOS. (A pure ASCII text file or a XyWrite III Plus file is preferred, but we are able to convert files of about 20 major word processors.)

More detailed instructions on journal style, reference citations, and format can be obtained on request. All inquiries should be addressed to:
